

Question 1

A security team wants some of its services to be hosted on the internet instead of local devices. However, they also need to maintain physical control over certain confidential data. What type of SIEM solution should they select? 1 / 1 point

Hybrid

Cloud-hosted

Remote

Self-hosted

Correct

They should select a hybrid solution. Hybrid solutions use a combination of both self- and cloud-hosted SIEM tools to leverage the benefits of the cloud while maintaining physical control over confidential data.

Question 2

Security information and event management (SIEM) tools provide dashboards that help cybersecurity professionals organize and focus their security efforts. 1 / 1 point

True

False

Correct

SIEM tools provide dashboards that help cybersecurity professionals organize and focus their security efforts. This allows analysts to reduce risk by identifying, analyzing, and remediating the highest priority items in a timely manner.

Question 3

Fill in the blank: A _____ SIEM tool is specifically designed to take advantage of cloud computing capabilities including availability, flexibility, and scalability. 1 / 1 point

cloud-infrastructure

cloud-hardware

cloud-local

cloud-native

Correct

A cloud-native SIEM tool, such as Chronicle, is specifically designed to take advantage of cloud computing capabilities including availability, flexibility, and scalability.

Question 4

What are the different types of SIEM tools? Select three answers. 1 / 1 point

Self-hosted

Correct

Feedback: The three different types of SIEM tools are self-hosted, cloud-hosted, and hybrid.

Cloud-hosted

Correct

Feedback: The three different types of SIEM tools are self-hosted, cloud-hosted, and hybrid.

Hybrid

Correct

Feedback: The three different types of SIEM tools are self-hosted, cloud-hosted, and hybrid.

Physical
