Question 1
Which log source records events related to websites, emails, and file shares, as well as password and username requests? 1 / 1 point
Receiving
Firewall
Network
Server
Correct
Server logs record events related to websites, emails, and file shares. They include actions such as login requests, password and username requests, as well as the ongoing use of these services.

Question 2
Fill in the blank: A security information and _____ management (SIEM) tool is an application that collects and analyzes log data to monitor critical activities in an organization. 1 / 1 point
event
emergency
employee
efficiency
Correct
A security information and event management (SIEM) tool is an application that collects and analyzes log data to monitor critical activities in an organization. SIEM tools index and minimize the scope of logs a security professional should manually review and analyze.

Question 3
A security professional evaluates a software application by reviewing key technical attributes including response time, availability, and failure rate. What are they using to assess performance? 1 / 1 point
Models
Metrics
Index standards
Cloud tools
Correct
They are using metrics. Metrics are key technical attributes including response time, availability, and failure rate, which are used to assess the performance of a software application. SIEM dashboards can be customized to display relevant metrics.

Question 4
Fill in the blank: SIEM tools must be configured and _____ to meet each organization's unique security needs. 1 / 1 point

Customized
centralized
reviewed
indexed
Correct
SIEM tools must be configured and customized to meet each organization's unique security needs.
